SUMMARY

Machine Learning (Tech) + AI Strategist (Business) with 9+ years of experience in tech and 8+ years in Data Science and Machine Learning. I have led teams at every phase of the Data Science lifecycle and developed algorithms that achieved high ROI results. I have been recognized and awarded for bringing new ideas and an analytical mindset to solve business problems.

EXPERIENCE

Senior Data Scientist

Synchron

August 2024 - Present, Bangalore

- Build a GenAI platform using LLM Mesh design principles from scratch to support scalable and cost-effective RAG solutions to dynamically process different formats of 50 TB of documents.
- Leveraging expertise in supply chain analytics to refine data science use cases on optimizing inventory processes and driving efficiency.

Principal Software Engineer - Data Science

Innova Solutions

April 2022 - August 2024, Hyderabad

- Recognized with "**ACS Idol**" reward at a highly prestigious event organized in Goa.
- Identified 14 different use cases in the machine learning domain after connecting with key stakeholders from the client's business.
- Converted the business problem of delays in the production schedule to the machine learning problem. Developed a regression algorithm to predict the production schedule end dates, improving **order cancellation by 8%**.
- Coordinated with leadership team to develop operations insights and developed a customer clustering algorithm that can segregate customers into clusters based on profitability, order volume, products, etc. helping the sales team for better targeting.
- Perform PoC to instruct fine-tune the LLM model based on PEFT techniques such as LoRA using Langchain framework.

Senior Software Engineer - Data Science

Innova Solutions

August 2017 - March 2022, Hyderabad

- Engineered machine learning algorithms that generate more accurate customer trend predictions and informed business decision-making.
- Interpreted and analyzed complex data using Python and developed a time series model that increased **shipment forecast accuracy by 38%**.
- Empower 4+ data science projects, by finding hidden connections in the supply chain converting the business problems into data science problems and solving problems on the SageMaker platform as an infrastructure.
- Hosted **Machine Learning Dev Day** where I gave key notes explaining how Machine Learning works and the technology ROI to the leaders.

Software Engineer

MAQ Software

June 2016 - July 2017, Hyderabad

- Developed end-to-end solutions in an agile environment for stakeholders simplifying day-to-day counterfeit operations.
- Honored 3 times with Spot Award for high quality & on-time delivery to a major US-based Fortune 100 client.

SKILLS

Technical Skills: Hypothesis Testing; SQL; Relational Database; Data Modelling; Time Series; Optimization; AWS SageMaker; Python; MLOps; NLP; Language Models-LLMs and BERT; GenAI; RAG; Langchain; Python Libraries such as NumPy, Pandas, Matplotlib, Seaborn, Scikit, Tensor Flow, and Keras; PySpark; Flask; FastAPI

Fields of Interest: Advance Data Analytics, Explainable Artificial Intelligence, Leadership, AI Product Management, Large Language Models

EDUCATION

MDP Program for Data Driven Product Management

Indian Institute of Management • Lucknow, India • 2024

Masters in Machine Learning and Artificial Intelligence

Liverpool John Moores University • Liverpool, England • 2021

PG Diploma in Machine Learning and Artificial Intelligence

International Institute of Information Technology • Bangalore, India • 2020

Bachelor of Technology in Software Engineering

SRM University • Chennai, India • 2016
